Multi-Material Cutter

3000 Technical Specs

Cutting Head: Rides on high tensile strength steel, hard chrome plated and polished, resulting in smoother gliding action for consistent cutting head performance and longevity.

Vertical Bars: Rails do not bend or flex during the cutting process for straight, accurate cutting over the entire substrate height.

Material Clamping System: Patented lever-type clamping system that secures in place various substrate heights up to 60″ (152cm) to prevent buckling and shifting of material during the cutting process.

Unique Performance Features

- Patented glass cutting turret has a ramping feature that allows the lifting of turret device on top edge of glass resulting in a cleaner edge break

- Wall-mounted or free-standing
